

Pulmonary embolism

Submitted by Emmanuel Lemoine on Tue, 12/16/2014 - 10:54

Titre	Pulmonary embolism
Type de publication	Article de revue
Auteur	Meyer, Guy [1], Roy, Pierre-Marie [2], Gilberg, Serge [3], Perrier, Arnaud [4]
Editeur	BMJ Publishing Group
Type	Article scientifique dans une revue � comit� de lecture
Ann�e	2010
Langue	Anglais
Date	2010/04/13
Volume	340
Titre de la revue	BMJ
ISSN	0959-8138
R�sum� en anglais	Complete occlusion of a peripheral pulmonary artery usually results in a pulmonary infarction with pleuritic chest pain and haemoptysis. When the blood clot is lodged in more proximal pulmonary arteries and is not occlusive, pulmonary infarction does not occur and pulmonary embolism might present as isolated dyspnoea. Massive pulmonary embolism is caused by large bilateral proximal clots resulting in haemodynamic collapse.
